

## Uni-Rail Storage & Flow Transfer System

- **Economical/Practical:** Use to carry parts from manufacturing to storage, transfer to different departments for assembly stages, send to trucking docks ready to ship
- **Production Changes/Overflow:** set up a mobile storage area in vacant regions in the plant or warehouse
- **Logistics:** Ship the carts over a long distance from one plant to another.
- **Cost Cutting & Savings:** use one style of rack and cart for all of your manufactured products.

### Features

The **transfer system** allows the operator to remove or add parts when the cart is engaged to the storage rack .

Allows you to store *and transfer* various parts with ease while minimizing the potential for damage.

- Hangers have wheels that ride on a flange for easy adjustment; excellent for both new programs and changing product.
- **Numerous versions of configurations/accessories including:**
  - Curved Sections
  - Docking/Transfer Sections
  - Splice Kits
  - Track switch stations

**Docking/Transfer Station**

**Mobile Transfer Cart Unit**

**Free Standing Structures**
